Marina Pump Out Boat

£0.00 tax included

Product features:

Length Overall: 7.15 m
Maximum Beam: 2.54 m
Draft: 0.48 m
Weight: 1175 kg
Fuel Capacity: 190 L
Max HP Engine: 200 HP
CE Category: D

Product short description:

Designed and assembled by Peter Leonard Marine, this vessel has many uses and adds a new revenue stream to your marina. Take the pump out system to your customers boats at their mooring.

Can also pump out bilges should a boat take on water.

Options include: fire pump, oil spill kit, pressure washer, generator, heavy duty fendering

Product description:

With the desire and requirement for marina operators to become more environmentally friendly, we have developed a marina pump out boat in conjunction with Leesan, the UKs leading pumpout specialists. We set out to create a boat that marina operators can be proud to own and not an old launch with a pump that ‘sort of works’! This is a fast growing problem and we hope boat owners will stop nipping out to see to discharge and ‘do the right thing’ for the world. Our boat is also a good option for marinas where a connection for a static pontoon mounted pump out is difficult due to access to the sewer network.

Our boats have a 500 litre holding tank with a petrol driven pump attached to a 10 metre suction

hose which connects to the customers holding tank outlet. Once the tank is full, the boat simple pulls up alongside either an existing pump out or man hole and discharges. This adds an additional revenue stream for the marina and also takes away the stress and wasted valuable leisure time for the boat owner.

The standard pumping system onboard can also be used as an emergency boat pump out should a vessel start sinking, by fitting a filter to the lance and placing in the bilges of the vessel.

Our pump out vessel has good forward access for the operator via the forward inbuilt staircase and opening screen. This allows the boat to push up between customers boats moored on finger berths. The operator can then step off over the bow and connect the suction hose.

Optional extras include:

- Fire pump
- Oil spill kits
- Heavy duty fendering
- Engine hp options depending on location ie. tidal flow etc.
- Bow thruster
- Pressure washer

Please get in touch to discuss your specific marinas requirements so we can build your bespoke marina pumpout and utility boat.
